Oliver West Footnotes Workshop:

Dates:

19th & 20th
January 2012

Equipping Visual Multi-Layered Thinkers

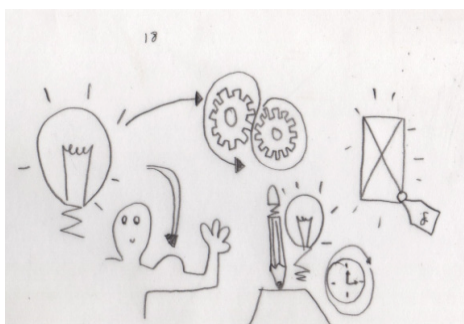

These two individual workshop days have been organised for all those working within education, business, welfare, behavioural and judicial sectors as requested by professionals within these disciplines. The structure of the days will also suit individuals, parents and support workers wanting to know more about how Visual and Multi-Layered Thinkers tick.

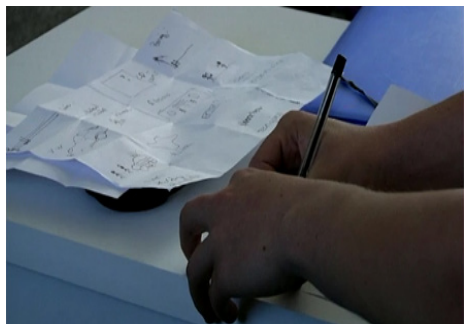

Oliver West will be delivering a series of specific strategies from the Footnotes Visual Thinking Program. The program has been developed over the past fifteen years drawn from his experiences as a dominantly visual, multi-layered thinker and as a practitioner within the field of educational and behavioural support. This series of workshop sessions will equip those wanting to open up the world of personalised strategies for living and learning in an ever changing and challenging society.

Footnotes techniques have proved to be of benefit to those who have recognised that they think predominantly in visual terms. These alternative learning methods and study skills introduce people of all backgrounds to visual thinking techniques which can allow them to realise their full potential. 'Footnotes' has also helped many individuals to overcome the day to day frustrations of being mis-understood and feeling isolated because of their way of thinking and associated behaviour. These children and adults alike are often multi-layered thinkers who struggle to order their simultaneous thoughts. Discovering that they are predominantly multi-layered thinkers, these strategies have proven to empower and bring dramatic positive change in these individuals' lives. The strategies focus on enabling children and adults alike to think visually and to assimilate, sequence, store, and recall information in their own way. This allows breakthroughs in ability to spell, reading, personal management, understanding, behaviour and processing of memory and emotions. This accumulative raft of strategies is applicable in all areas of life.

Oliver currently delivers the Footnotes programme in the UK and internationally across schools, Universities, businesses and also within the Welfare and Youth Offending Services.

The main focus of these workshop days is to offer equipping strategies and to highlight the need for a greater awareness of individual thinking styles and the consequences of living in a society that has for decades overlooked the very great potential of visual and multi-layered thinkers.

These workshops can be booked either as individual days or as a pair please see price on page 4 and for a group booking price contact Oliver directly.

Background

Within our society, educational institutions and places of work, we are often made aware that methodologies and benchmarks may not always accommodate all the needs of each individual. Information is often presented in a linear, lexical way on the assumption that this method of communication is universally effective. As a consequence, there are often individuals who feel marginalised because of differences in their social, cultural and educational experiences or under challenged in their learning experience. For a number of reasons a large proportion of the population have, or develop, a bias towards creative, multi-layered and visual ways of thinking. They find certain social systems and workplace environments unaccommodating and are challenged by the demand on them to engage with the linear environment that surrounds them. They have to learn how to meet these challenges and to process information in their own personalized way.

Oliver West Footnotes

The Footnotes technique makes for an ideal alternative learning tool that changes the typical learning environment into a play ground for exploring new ways of thinking and learning. It allows individuals to flourish and has a unique edge in allowing young entrepreneurs to discover themselves and develop new found skills. Through the flexibility of learning through visual terms the individual benefits from a heightened awareness of the self.

The Footnotes programme aims to encourage young people and adults alike to realize and develop their potential as visual thinkers. Oliver's strategy is an effective tool in changing behavioural and thought processes as well as learning strategies. The emphasis of the programme is to encourage innovative thinking and to develop entrepreneurial skills that will help lead individuals towards a promising future and change horizons for others who may have become stagnant in their learning and development.

The programme generates energy and renewed enthusiasm for learning and helps inspire individuals in areas old and new. Aspirations change and communication skills grow as individuals and groups discover more about their preferred styles of learning and personality type.

The programme is effective with people of all ages and levels and makes learning exciting. It challenges traditional systems and is illuminating in that it meets the needs of the younger generation, and introduces the older generation to a world where visual learning is ever more prevalent.

The programme can be tailored to suit a specific subject area depending on the individuals requirement. The strategy is a cost effective tool for learning and requires nothing more in the initial stages than a sheet of A4 paper.

Oliver West

Oliver currently works within a variety of settings in the UK and abroad. Oliver has written and published a book 'In Search of Words - The Footnotes Strategy'. This can be purchased online at www.oliverwestfootnotes.com
